

Hackathon Project Phases Template that ensures students can complete it efficiently while covering all six phases. The template is structured to capture essential information without being time-consuming.

Hackathon Project Phases Template

Project Title:

CareWise : AI Symptom Checker and Treatment Advisor

Team Name: TEAM LEGENDS

Team Members:

- P.Venkatadri
 - T.Rupesh Reddy
 - V.Mohith
 - CH.Jeevan Sankar
 - B.Vijay Kumar
-

Phase-1: Brainstorming & Ideation

Objective:

- Identify key healthcare challenges.
- Define how AI can assist in symptom checking and treatment advising.

Key Points:

- **Problem Statement:** What healthcare issue does CareWise address?
 - **Proposed Solution:** How does AI enhance symptom checking and treatment suggestions?
 - **Target Users:** Patients, doctors, healthcare providers, etc.
 - **Expected Outcome:** What benefits will CareWise offer to users?
-

Phase-2: Requirement Analysis

Objective:

- Define the technical and functional requirements of the AI-driven system.

Key Points:

- **Technical Requirements:** Machine learning models, NLP frameworks, APIs
 - **Functional Requirements:** User symptom input, AI-driven recommendations, chatbot interface, etc.
 - **Constraints & Challenges:** Data privacy, model accuracy, regulatory concerns
-

Phase-3: Project Design

Objective:

- Structure the architecture and user flow of CareWise.

Key Points:

- **System Architecture Diagram:** Sketch AI model, backend, frontend components
 - **User Flow:** How a user interacts with CareWise from symptom input to recommendations
 - **UI/UX Considerations:** Intuitive chatbot, user-friendly results display
-

Phase-4: Project Planning (Agile Methodologies)

Objective:

- Use Agile methodologies to divide work efficiently.

Key Points:

- **Sprint Planning:** Assign core tasks for development, testing, and deployment
 - **Task Allocation:** Who will work on AI model, UI, database, etc.?
 - **Timeline & Milestones:** Break tasks into phases for quick iterations
-

Phase-5: Project Development

Objective:

- Implement AI-powered symptom checking and treatment advising.

Key Points:

- **Technology Stack Used:** Python, TensorFlow, NLP libraries, healthcare APIs
 - **Development Process:** Training AI, integrating with chatbot, refining accuracy
 - **Challenges & Fixes:** Handling medical data biases, improving response precision
-

Phase-6: Functional & Performance Testing

Objective:

- Ensure AI predictions and recommendations are accurate and reliable.

Key Points:

- **Test Cases Executed:** Various symptom inputs tested
 - **Bug Fixes & Improvements:** Refining AI model based on feedback
 - **Final Validation:** Checking system effectiveness against real medical data
 - **Deployment (if applicable):** Hosting details or live demo setup
-

Final Submission

- **Project Report** Based on this template
 - **Demo Video** 3-5 Minutes showcasing CareWise
 - <https://github.com/Mohith-171006/Team-Legends.git>
 - **Presentation**
-
